Challenge chapter 3 sesi 2 : Membuat API dengan middleware authentication, authorization multi level user, dan authorization product by user id

User	System

User:

● → user melakukan registrasi → user melakukan login → login success ?

user melakukan CRUD

System:

middleware authenticatiom

authentication failed

authentication → auth success ? — yes → generating token → token JWT

middleware authorization

authorization multi level user

```
                        admin                    user

                product authorization    product authorization
                        all                      by id

                  Create, Read,              product user id = user id  ────────►  authorization failed
                  Update, Delete

                                                        │ yes

                                                   create, read

                              ●
```
